Reinforce Whole Brain Thinking Approach

"Apply thinking habits and insights to build high-performing individual and team"

Building positive relationships	Individual Development	If trainers at SeaWorld can build positive relationship with Killer Whales, why can't we as humans? Being intentional about a positive interaction is the basis of this session. You will learn three essential approaches to improving work relationships and a method to provide positive feedback.
Coaching & Mentoring	Team Development	Use Whole Brain learning and the G.R.O.W. model to create a coaching and mentoring culture.
Employee Engagement & Empowerment	Organizational Development	Engage your employees by implementing a culture of Whole Brain leadership.
Building Trust	Individual Development	What is the difference between trust and trustworthy? Understanding the dynamics between these two behaviors is critical to building a positive relationship. It is the foundational principle with which collaboration, communication and accountability happen.
Listen Up	Individual Development	Apply the five-step process to lead up and influence others.
Problem Solving	Individual Development	Do you find yourself drifting off from time to time? During this session you will discover what's happening in our heads and how we process information; realizing at times our brain experiences "voids". To understanding why gaps happen; we first need to
Leading Generational Change	Organizational Development	People have brains 1.5 million times larger than ants. Why can't they get more done? Answer: Generational Influence. There could be up to five generations in the workplace, each bring a unique experience and thinking habit. We will learn and apply the M.E.E.T. model in working effectively across generations.
Creativity	Individual Development	The silent critic in us all too often slants our opinion about creative ideas and innovations. We don't intentionally "kill" a good idea or do we? In this session we will learn to value a creative idea and experience a five step process to increase personal and organizational creativity.
Learning and Teaching	Team Development	In this session, you will discover the science behind how we learn and how what we learn can transcend into a teaching moment. We will use a design approach to outline learning strategies and take advantage of learn and teaching unique behaviors.
Paying Attention	Individual Development	Do you find yourself drifting off from time to time? During this session you will discover what's happening in our heads and how we process information; realizing at times our brain experiences "voids". To understanding why gaps happen; we first need to explore how context impacts listening skills
Conflict Resolution	Organizational Development	None of us really enjoy conflict, or do you? During this session we will review how conflict happens and leverage our thinking styles to not avoid it all together. Health conflict will lead to newly discovered opportunities and crucial conversations.
